

Minutes of Meeting
Colbert Water Sampling Committee
August 2, 1991

Present: Scott Fink, (b)(6) and Bill Wedlake

I. (b)(6) Property

The planning action for the (b)(6) property has been approved. Now there is a 20 day period in which concerns can be turned in.

The Committee drafted a letter to the County Planning and or Tom Mosher expressing their feelings about the property. The Committee feels that additional wells should not be allowed due to the area being on the leading edge of the contaminant plume and the affects they may have on the current extraction wells. Cross contamination between aquifers in the contaminated area is another concern from a public health standpoint and the possibility of additional remediation problems. (b)(6) will type the letter and give it to Bill and Scott for review. Carbon copies will go to the Health District, Neal Thompson and Mike Kuntz.

II. New Business/Management Plan

Objective and guidelines of the Committee will be sent to Neal Thompson and Mike Kuntz for approval. Once approved, the sampling program will be officially adopted. Copies will not be mailed to everyone, but will be available for those people who wish to have them.

(b)(6) noted that under "Project Objective" the year should be changed from 1988 to 1989 in paragraph one.

III. Change in Sampling Criteria

Per a conversation (b)(6) had with Neal Thompson, she felt the quarterly sampling criteria should be changed to include Class 4 public water systems in the area. The Committee amended the language.

IV. Water Sampling Results

Results are first checked for any constituents of concern. If any are found, the history of those contaminants is checked. They should not exceed 65%.

The new results from Loucks Laboratory seem to be fine. No one has had any negative feedback regarding them.

V. Other Business

(b) (6) asked that Bill bring information to meetings regarding any new wells, sales of property or new construction that Troy may notice while out in the field. She also asked that if Troy has any problem with people out in the field, that it be brought to the Committee's attention. Bill noted that that is in the Management Plan.

(b) (6) is writing a letter to Whitworth Water expressing concern over misinformation being given out to people regarding water supply.

NEXT MEETING: Sometime in early September.
